

boredom and childishness were the natural state of affairs in the classroom. Often I had to defy custom, and even bend the law, to help kids break out of this trap.

The empire struck back, of course; childish adults regularly conflate opposition with disloyalty. I once returned from a medical leave to discover that all evidence of my having been granted the leave had been purposely destroyed, that my job had been terminated, and that I no longer possessed even a teaching license. After nine months of tormented effort I was able to retrieve the license when a school secretary testified to witnessing the plot unfold. In the meantime my family suffered more than I care to remember. By the time I finally retired in 1991, I had more than enough reason to think of our schools—with their long-term, cellblock-style, forced confinement of both students and teachers—as virtual factories of childishness. Yet I honestly could not see *why* they had to be that way. My own experience had revealed to me that many other teachers must learn along the way, too, yet keep to themselves for fear of reprisal: if we wanted to we could easily and inexpensively jettison the old, stupid structures and help kids *take* an education rather than merely *receive* a schooling. We could encourage the best qualities of youth fullness—curiosity, adventure, resilience, the capacity for surprising insight—simply by being more flexible about time, texts, and tests, by introducing kids to truly competent adults, and by giving each student what autonomy he or she needs in order to take a risk every now and then.

But we don't do that. And the more I asked why not, and persisted in thinking about the "problem" of schooling as an engineer might, the more I missed the point: What if there is no "problem" with our schools? What if they are the way they are, so expensively flying in the face of common sense and long experience in how children learn things, not because they are doing something wrong but because they are doing something right? Is it possible that George W. Bush accidentally spoke the truth when he said we would "leave no child behind"? Could it be that our schools are designed to make sure not one of them ever really grows up?

Do we really need school? I don't mean education, just forced schooling: six classes a day, five days a week, nine months a year, for twelve years. Is this deadly routine really necessary? And if so, for what? Don't hide behind reading, writing, and arithmetic as a rationale, because 2 million happy homeschoolers have surely put that banal justification to rest. Even if they hadn't, a considerable number of well-known Americans never went through the twelve-year wringer our kids currently go through, and they turned out all right. George Washington, Benjamin Franklin, Thomas Jefferson, Abraham Lincoln? Someone taught them, to be sure, but they were

not products of a school *system*, and not one of them was ever "graduated" from a secondary school. Throughout most of American history, kids generally didn't go to high school, yet the unschooled rose to be admirals, like Farragut; inventors, like Edison; captains of industry, like Carnegie and Rockefeller; writers, like Melville and Twain and Conrad; and even scholars, like Margaret Mead. In fact, until pretty recently people who reached the age of thirteen weren't looked upon as children at all. Ariel Durant, who co-wrote an enormous, and very good, multivolume history of the world with her husband, Will, was happily married at fifteen, and who could reasonably claim that Ariel Durant was an uneducated person? Unschooled, perhaps, but not uneducated.

We have been taught (that is, schooled) in this country to think of "success" as synonymous with, or at least dependent upon, "schooling," but historically that isn't true in either an intellectual or a financial sense. And plenty of people throughout the world today find a way to educate themselves without resorting to a system of compulsory secondary schools that all too often resemble prisons. Why, then, do Americans confuse education with just such a system? What exactly is the purpose of our public schools?

Mass schooling of a compulsory nature really got its teeth into the United States between 1905 and 1915, though it was conceived of much earlier and pushed for throughout most of the nineteenth century. The reason given for this enormous upheaval of family life and cultural traditions was, roughly speaking, threefold:

1. To make good people.
2. To make good citizens.
3. To make each person his or her personal best.

These goals are still trotted out today on a regular basis, and most of us accept them in one form or another as a decent definition of public education's mission, however short schools actually fall in achieving them. But we are dead wrong. Compounding our error is the fact that the national literature holds numerous and surprisingly consistent statements of compulsory schooling's true purpose. We have, for example, the great H. L. Mencken, who wrote in *The American Mercury* for April 1924 that the aim of public education is not

to fill the young of the species with knowledge and awaken their intelligence. . . . Nothing could be further from the truth. The aim . . . is simply to reduce as many individuals as possible to the same safe level, to breed and train a standardized citizenry, to put down dissent and originality. That is its aim in the United States. . . . and that is its aim everywhere else.
