Title: Bio Sensor to avoid Heart Failure or Heart Related Diseases

Project policies
• **The project report may include your project title, abstract, literature review, identification of one course-related challenge, how to solve this challenge, experimental, or analytical or numerical results and discussion, conclusions, and references.**
• **Format of the report: single spacing, one-inch margin, and 12 pt. Times New Roman for the main text body.**

Note: I'm attaching a reference paper which is done by my senior in the last semester and also, I need sufficient number of graphs and diagrams which could be presentable during our presentation.

Brief Description:

I need a brief description for every section which is made because me and my group mates should do the presentation which lasts for 15-20 mins. So, I need the Project in a separate file and its description and explanation for every section in one file because that will more easier for me to understand and present during our presentation.

It would be great if you follow all the requirements and give me a good project and its explanation.
